## CLAIMS

1	1. A method for integrating run-time metrics into an integrated development
2	environment (IDE), the IDE including a runtime environment and a user interface
3	environment, the method comprising:
4	determining an application component to be monitored in the IDE, the
5	application component having associated information in a component
6	repository of the IDE runtime environment;
7	monitoring the application component in the IDE runtime environment to
8	determine a plurality of metrics associated with the application
9	component;
10	transmitting the plurality of metrics to a data collector of the IDE user
11	interface; and
12	displaying the metrics to a user of the IDE.
